MIX WELL BEFORE USING

Halo Max is a liquid nitrogen fertilizer with sulfur and chelated micronutrients. The low pH of Halo Max helps reduce solution pH, making micronutrients more available for plant uptake. The additional and readily available sulfur is helpful in supplementing supply in low sulfur situations.

Directions For Use: For agricultural crops, apply at a rate of one to two gallons of Halo Max per acre as needed. For soil applications, mix at least one part Halo Max with two parts water, adding enough water for uniform product delivery. Halo Max may be placed in furrow or sprayed as a broadcast or top-dress. For foliar application, apply one to two gallons of Halo Max per acre. Mix Halo Max with water for a total of at least 15 gallons per acre.
