# Making Every Drop Count

If your operation is located in a dry region or an area affected by drought, EnviroMoist can help you make the most of the water that's available.

This balanced, environmentally friendly liquid fertilizer contains plant nutrients, carbon for soil microbes and polymer gel granules. These granules expand up to 200 times their weight in water when wet to keep water near roots to capture moisture, hold it and release it slowly as needed.

Nutrients that are dissolved in water are also held in the gel, helping nurture initial root growth following transplant. This is critical to plant establishment, which helps reduce plant loss and improve productivity.

The net effect of EnviroMoist is to reduce water evaporation and maintain soil moisture, as well as nutrient availability, in the root zone.

## Ideal for New Plantings

EnviroMoist is an excellent solution for growers who are transplanting—whether it's in a field, landscape, orchard or vineyard. The continuous availability and slow release of water helps reduce moisture and nutrient stresses during the critical seeding and transplanting stage. Growers can increase transplant survival rates, saving dollars and resources.

## Start Today

To find out more about EnviroMoist, visit our website at [Solutions4Earth.com](http://Solutions4Earth.com) or call **855-834-3882**.

**Solutions 4Earth is a soil and environmental science company specializing in next-generation, non-toxic nutrients for maximum plant growth and production with favorable ecological impact.**
