DAIRY WASTE
MANAGEMENT SOLUTION

**SOLUTIONS
4Earth**

Making Dairy Waste Management Simple.

There's a better solution for dairy lagoon treatment. It's called EnviroLagoon®, and after 10 years, it's become the single most successful waste treatment product in the industry.

EnviroLagoon is an easily applied liquid solution specifically developed to reduce solids and odors of manure treatment facilities.

For dairy operators nationwide, it has proven to deliver outstanding performance in:

- **Increasing profitability and safety**
- **Reducing odors**
- **Breaking down solids**
- **Improving nutrient availability to crops**
- **Easing pumping, reducing time and fuel needed for agitation and removal**
- **Helping increase lagoon capacity**

Easy to Use. Quick Results.

EnviroLagoon goes to work immediately, stimulating both aerobic and anaerobic activity. Increased anaerobic activity brings bottom solids to the surface where faster acting aerobic bacteria can break them down quickly.

By introducing EnviroLagoon into the lagoon environment, you increase oxygen and carbon levels in the aquatic system. This action also reduces odor because aerobic digestion's byproducts are mostly water and carbon dioxide.

EnviroLagoon also promotes soil health when the lagoon is treated and then land-applied. The treated water aerates the soil, increases water penetration and improves soil fertility, resulting in greater plant production and yield potential.

EnviroLagoon is effective in all types of lagoons, pits and waste storage structures of any size, depth or animal loading rate and performs in all weather conditions.

What Producers Say

"We had a problem with the pipe clogging — twice in only six months — costing \$2,500 each time to clean it out. After the second clog, I added five gallons of EnviroLagoon to the pipes and within 12 hours the pipes were cleared. When we next pumped the lagoon, the solids were no problem, and the pumps and paddle motors sound and perform better. **There is no doubt, the product works!**"

— George B., Deloraine, MB

"Immediately after adding EnviroLagoon to our manure system, **pits became much easier to agitate and pumped out in significantly less time.** The product also reduced odor levels of the manure during field application."

— Kelly O., Auburn, NY

"We started using EnviroLagoon in the spring because it was **environmentally safe and easy to use.** The manure was much easier to mix to a liquid state and spread on the fields. We also noticed that alfalfa and silage crops absorbed the nutrients better and there was no burn on the alfalfa due to lack of salts. The time between the first cut and second alfalfa cut is down to 4-5 weeks from 6-7 weeks before we started using EnviroLagoon."

— Gavin R., City

"We have been using EnviroLagoon for a year now in one of our waste-water lagoons on our 2,400-cow dairy. During this time we have seen it turn from green and stagnant to brown and bubbling, **showing more digestion activity, and it's a lot cleaner when we pump it out.** We know this product works because we see the results."

— Joel V., Lone, OR

EnviroLagoon®

Reduces Solids Up to 42 Percent

Five years of data from more than 400 U.S. dairy farms shows EnviroLagoon reduces solids by up to 42 percent within the first year of regular use.

Available Sizes

EnviroLagoon is conveniently available in 2.5 gallon jugs, 55 gallon drums and 270 gallon totes.
